

HAMMER/HACKING KNIFE

Made by Footprint Tools in Sheffield, England, our versatile Hammer/Hacking Knife is the perfect tool to have around. Originally used with a hammer to chip old putty out of window frames, our Hammer/Hacking Knife can do anything a standard utility knife is just not strong enough to do. Cut wires; twigs, roots and branches; open and knock-down boxes; cut difficult material such as rubber, leather and vinyl; split stuck joints; and more. Drop forged of high carbon steel, the 4-1/2" long tapered blade is hardened on the cutting edge to stay sharp, and unhardened on the back edge making it safe to strike with a hammer. Features a comfortable leather grip. Optional leather sheath available.

Ideal for: Automotive • Construction • Gardening • Glazing • Industrial • Woodworking
